HD Cooling Module

The TL10 is engineered to deliver excellent power and performance. It features a powerful 92.0 HP engine coupled with double reduction planetary drives enabling it to work in extreme applications. The radial lift design allows it to exceed in excavation and grading applications while providing excellent mid-height reach. The operator is able to monitor machine functions and performance via multi-information display while precisely controlling travel and loader functions with pilot operated joysticks. A deluxe high back suspension seat reduces fatigue and delivers excellent comfort and

visibility while on the job. The operator's cabin is spacious and the available cab has an overhead door that can be opened or closed while operating the TL10. The heavy duty rear door protects vital engine and hydraulic components and has a locking mechanism to keep it open while performing daily inspections. The high capacity cooling module features a side-by-side radiator and oil cooler that allow the TL10 to operate efficiently, while remaining easy to inspect and clean. With the cabin tilted the inside of the frame can be inspected with easy access to maintenance points.
